

다음 글에서 묘사된 전자 기기의 특징으로 언급되지 않은 부분을 고르시오.

Cities in the UK like London, Glasgow, and Birmingham are fitting a new electronic device to lamp posts in areas which have a crime problem. It's called Flashcam and has been developed by an American company, Q Star. If a motion sensor detects a group of people in an area where there is no reason for them to be, it shouts a warning at them such as: If you are engaging in an illegal activity, your photograph will be taken, so please leave the area. If people don't move, it goes off with a very intense flash and a loud shout. However, the picture isn't actually taken because there isn't a camera attached to the device. Nevertheless, they have had a positive effect in some parts of London on reducing crime and anti-social behavior.
